

NARENDRA MAHI

DevOps Engineer | Cloud Automation | Infrastructure as Code

+91-9140377894 • Narendramahi007@gmail.com • linkedin.com/in/narendra-mahi

TECHNICAL SKILLS

Cloud Platform

Microsoft Azure
Azure VMs & App Services
Azure Blob Storage
VNet, NSG, Key Vault

Infrastructure as Code

Terraform
State Mgmt & Modules
Remote Backends

CI/CD & Automation

Azure DevOps (YAML)
GitHub Actions
Build & Release Pipelines

Version Control

Git / GitHub

Scripting & OS

Linux (Ubuntu)
Windows Server
Bash / Shell Scripting
PowerShell
Azure CLI

Monitoring & Logging

Azure Monitor
Log Analytics
Application Insights

Web & Networking

Nginx / IIS
DNS, Load Balancing
L1/L2 Troubleshooting
RF / Telecom Networks

EDUCATION

B.Tech – Electronics &
Communication Engg.

AKTU, Lucknow | 2016

12th – U.P. Board | 2012

10th – U.P. Board | 2010

PROFESSIONAL SUMMARY

Dynamic DevOps Engineer with over 6 years of IT experience, including 3+ years specializing in DevOps and Cloud Engineering. Expertise in architecting scalable solutions on Microsoft Azure using Terraform and Infrastructure as Code (IaC). Experienced in designing and managing robust CI/CD pipelines with Azure DevOps and GitHub Actions to accelerate software delivery. Proficient in containerization using Docker and orchestrating automated workflows. Proven track record of transitioning complex telecom IT infrastructures into automated cloud environments with high availability, security, and operational efficiency.

PROFESSIONAL EXPERIENCE

DevOps / DevOps Engineer

Mar 2023 – Mar 2026

UST Global

- Provisioned and managed Azure infrastructure (VMs, VNet, NSG, App Services, Storage Accounts, Key Vault) using Terraform (IaC) — wrote modular .tf files, managed remote state in Azure Blob, and pushed all code to Git repository with proper branching strategy (feature/dev/main).
- Configured Git-based trigger in Azure DevOps pipelines — any push or pull request to the main branch automatically triggered the CI pipeline, ensuring continuous integration without manual intervention.
- Designed and maintained multi-stage CI/CD pipelines using Azure DevOps with YAML configuration — pipeline stages included code checkout, Terraform init/plan/apply, code quality scan, and deployment to Azure environments.
- Registered and configured self-hosted Azure DevOps pipeline agents on Linux VMs — installed agent service, connected to Azure DevOps agent pool, and assigned pipelines to run on these agents for controlled and secure execution.
- Integrated SonarQube code quality analysis into the CI pipeline — configured SonarQube server connection in Azure DevOps, added SonarQubePrepare, SonarQubeAnalyze, and SonarQubePublish tasks in YAML pipeline to enforce code quality gates before deployment.
- Monitored Azure resources using Azure Monitor and Log Analytics; configured metric alerts and dashboards to proactively detect and resolve incidents, maintaining high system availability and meeting SLA requirements.

Azure Cloud Engineer

Jun 2021 – Nov 2021

Insta ICT Solutions

- Deployed and managed Azure Virtual Machines (Windows and Linux), configured VM sizes, availability sets, and managed disks as per project requirements.
- Created and managed Azure Resource Groups, Virtual Networks (VNet), Subnets, and Network Security Groups (NSG) to design secure and isolated cloud network environments.
- Managed Azure Blob Storage, storage accounts, and access keys; configured lifecycle policies and set up role-based access control (RBAC) for secure resource management.
- Monitored Azure resources using Azure Monitor — set up metric alerts, activity log alerts, and reviewed diagnostic logs to proactively identify and resolve cloud infrastructure issues.

IT Support Engineer

Jan- 2019 – Marr 2020

Accord Synergy / Aerial Telecom

- Delivered IT and telecom (RF) support across multiple enterprise projects and distributed environments.
- Managed Linux (Ubuntu) and Windows servers including configuration of Nginx and IIS web services.

IT Support Engineer

Integrated Wireless Solutions/ Taleysia (Pay-Role)

Aug- 2017 – Oct 2018

- Handled L1/L2 troubleshooting for hardware, software, and network infrastructure across sites.
- Supported RF/network operations by monitoring performance metrics and resolving connectivity issues.
- Managed incident tickets, performed root cause analysis, and provided remote and on-site support to end users.

KEY ACHIEVEMENTS

- Automated Azure infrastructure provisioning with Terraform, eliminating manual setup and reducing environment spin-up time.
- Built end-to-end CI/CD pipelines in Azure DevOps that streamlined delivery from code commit to production deployment.
- Contributed to migrating legacy telecom IT workloads to Azure cloud, improving scalability and reducing operational overhead.
- Proactively monitored cloud resources reducing incident response time through automated Azure Monitor alerting.
- Maintained active GitHub repositories showcasing real-world Terraform and Azure automation scripts.
